Customer Support

Global Network | Parts | Human Resources

Doosan service is only a phone call away, but our commitment to personal service means there are no long-distance call centres. Instead, the “Doosan Difference” means your local service company will know you by name and respond quickly and knowledgeably when you need them, with over 700 fully equipped and factory trained mobile engineers available across the UK.

All Doosan products are built with serviceability in mind. By using the very latest engine technology, and applying our robust build philosophy of more metal than plastic, we keep your servicing costs to a minimum as well as reducing your damage and out-of-contract costs.

We aim to provide the highest level of service at a competitive price, delivered by a local agent you can rely on. This is complemented by local parts availability through our fully-stocked Northampton-based Parts Centre, where our Pre-Delivery Inspection (PDI) facility also holds a large stock of new vehicles. Doosan Genuine Parts offer unrivalled reliability and are guaranteed to

ensure you get the most from your vehicle, thereby achieving full return on your investment.

Don't just take our word for it. Everyone considering a Doosan product is warmly invited to our offices in Northampton to inspect our products at first-hand, and to see for themselves the high level of after-sales support we offer to all of our customers.

About Doosan

Values that drive our future growth

Trust in people is the foundation upon which Doosan has built its century of success

Over the past 120 years Doosan has always put people first, based on the management philosophy outlined by our first Chairman, Too Pyung Park, that “business is not meant to make profits, but to help people grow.”

This philosophy continues to spur Doosan's corporate development, with global competitiveness originating from our most valuable resource—our people.

Doosan, Korea's oldest but fastest growing company

Established in 1896, Doosan is Korea's oldest company, but has grown at its most rapid pace in the last 10 years.

Doosan's global Infrastructure Support Business (ISB)

In the past 70% of our business was concentrated on consumer goods, but following reorganisation of our business portfolio in 1998 we have successfully transformed our business DNA to shift the primary focus of our business to infrastructure support. This means that Doosan now creates more than 90% of its sales through its Infrastructure Support Business.

Doosan's growth as a global company

Doosan has become the global ISB leader based on its world-class products and services. It is a truly global company, with 50% of its employees based outside Korea, and overseas trade making up over 60% of its total sales.
